Abstract

Your abstract.

1 Introduction

Your introduction goes here! Simply start writing your document and use the Recompile button to view the updated PDF preview. Examples of commonly used commands and features are listed below, to help you get started.

Once you're familiar with the editor, you can find various project settings in the Overleaf menu, accessed via the button in the very top left of the editor.

2 Some examples to get started

2.1 How to create Sections and Subsections

Simply use the section and subsection commands, as in this example document! With Overleaf, all the formatting and numbering is handled automatically according to the template you've chosen. If you're using Rich Text mode, you can also create new section and subsections via the buttons in the editor toolbar.

2.2 How to include Figures

First you have to upload the image file from your computer using the upload link in the file-tree menu. Then use the includegraphics command to include it in your document. Use the figure environment and the caption command to add a number and a caption to your figure. See the code for Figure 1 in this section for an example.

Note that your figure will automatically be placed in the most appropriate place for it, given the surrounding text and taking into account other figures or tables that may be close by.

2.3 How to add Tables

Zotero-Referenzen in ein Projekt importieren

  publisher = {Budrich},
  author = {Keseling, Gisbert},
  editor = {Dreyfurst, Stephanie and Sennewald, Nadja},
  year = {2014},
  pages = {235--256},
}
```

the margins directly.
If however you're using a more general template, such as this one, and would like to alter the margins, a common way to do so is via the geometry package. You can find the geometry package

Wenn Sie nach dem Import in Zotero Daten aktualisieren, können Sie Overleaf anweisen, die .bib-Datei ebenfalls zu aktualisieren (**Refresh**), um sie mit den in Zotero vorgenommenen Änderungen zu synchronisieren.

2.9 How to add Citations and a References List with Zotero

After linking Zotero to your Overleaf account, you can add references to your project: You can import Zotero's My Library or individual Group Libraries to create a read-only (non-editable) .bib file which can be synched with your Zotero account. If you update reference data in Zotero, you can instruct Overleaf to update (refresh) the .bib file to synch it with the changes made in Zotero. Watch the video below for a demonstration of importing references from Zotero. You can then cite entries from it, like this: [KC21]. Just remember to specify a bibliography style, as well as the filename of the .bib.

2.10 Good luck!

We hope you find Overleaf useful!
